### Response:

Git is used to help find files and create and delete folders, repositories, and branches through commands. We would be using Git to utilize GitHub. One of the issues that I had was after creating the branches and files inside that branch I was unable to config them so I was able to see the branch and files in Git Hub. I fixed those issues by checking to see if I had misspelled any files or branch names as well start over from the beginning to make sure that I followed every step completely.
